1 Pipeline Map Until Feature Engineering

1.1 Goal

Keep the current work split into small notebooks without losing the analysis thread.

1.2 Source Notebook

- 01_data_ingestion_enrichment/copia_01_profiling_empresas_profesional_con_matching - copia.ipynb

1.3 Execution Order

1. 01_data_ingestion_enrichment/01_profiling_fuentes_validacion_join.ipynb
2. 02_data_cleaning/01_staging_empresas_normalizadas.ipynb
3. 02_data_cleaning/02_matching_exacto_scvs.ipynb
4. 02_data_cleaning/03_catalogos_y_torneo_fuzzy.ipynb
5. 02_data_cleaning/04_auditoria_llm_y_match_final.ipynb
6. 02_data_cleaning/05_utilidad_consulta_ruc.ipynb
7. 03_feature_engineering/01_base_analitica_empresas.ipynb
8. 03_feature_engineering/02_features_fuentes.ipynb
9. 03_feature_engineering/03_matriz_final_clustering.ipynb

1.4 Rules

- 01 is only for ingestion, profiling, and integration evidence.
- 02 is for normalization, matching, audit, and validated entity outputs.
- 03 starts only after a trusted company or RUC key exists.
- Each notebook must read the previous notebook output and write its own checkpoint in outputs/.
- Keep notebook names ordered with numeric prefixes.
